

MARWADI UNIVERSITY

Branch/ Semester	Bachelor of Computer Applications
Subject Name:	RDBMS
Subject Code:	05MC0105
Assignment:	Strategic coaching assignment
Date:	11-11-2024
Group:	Premium

1. Create following table : product

Field Name	Data Type	Size	Constraints
ProductID	NUMBER	3	PRIMARY KEY
ProductName	VARCHAR	100	NOT NULL
Category	VARCHAR	50	NULL allowed
Description	VARCHAR	255	NULL allowed
Price	DECIMAL	(10,2)	NOT NULL, CHECK (Price >= 0)
QuantityInStock	NUMBER	3	NOT NULL, DEFAULT 0, CHECK (QuantityInStock >= 0)
SupplierID	NUMBER	4	
AddedDate	DATE	—	DEFAULT (CURRENT_DATE)
Status	VARCHAR	20	DEFAULT 'Available'

Order:

Field Name	Data Type	Size	Constraints
OrderID	NUMBER	3	PRIMARY KEY
CustomerName	VARCHAR	100	NOT NULL
CustomerPhone	VARCHAR	15	NULL allowed
OrderDate	DATE	—	DEFAULT (CURRENT_DATE)
ProductID	NUMBER	3	FOREIGN KEY REFERENCES Product(ProductID), NOT NULL
QuantityOrdered	NUMBER	5	NOT NULL, CHECK (QuantityOrdered > 0)
TotalAmount	DECIMAL	(10,2)	NOT NULL, CHECK (TotalAmount >= 0)
Status	VARCHAR	20	DEFAULT 'Pending'

1. Update the **price** of one product by 10.
2. Update the **quantity ordered** in one of the orders were ordered=101
3. Change the **status** of an order from *Pending* to *Confirmed*.
4. Show all products with their details.
5. Show all confirmed orders with customer names and product IDs.

	<p>6. Find products that cost more than 5000. 7. Count how many orders were placed for each product. 8. Find the most expensive product in the Product table. 9. Write a query to display each order with its product name. 10. Display all orders where the product belongs to the Electronics category. 11. Show all product names , category and description in uppercase 12. Round off product price and display it with product name 13. Show the highest and lowest product price. 14. Find out sum of total amount as per status 15. Show first 5 characters of each product name.</p>																																																								
2.	<p>Create following tables.</p> <p>Transport</p> <table border="1"> <thead> <tr> <th>Field Name</th><th>Data Type</th><th>Size</th><th>Constraints</th></tr> </thead> <tbody> <tr> <td>VehicleID</td><td>NUMBER</td><td>6</td><td>PRIMARY KEY,</td></tr> <tr> <td>VehicleNumber</td><td>VARCHAR</td><td>20</td><td>NOT NULL, UNIQUE</td></tr> <tr> <td>VehicleType</td><td>VARCHAR</td><td>50</td><td>NOT NULL</td></tr> <tr> <td>Capacity</td><td>NUMBER</td><td>3</td><td>NOT NULL</td></tr> <tr> <td>Status</td><td>VARCHAR</td><td>20</td><td>DEFAULT 'Available'</td></tr> <tr> <td>PurchaseDate</td><td>DATE</td><td>—</td><td>NULL allowed</td></tr> </tbody> </table> <p>Drivers</p> <table border="1"> <thead> <tr> <th>Field Name</th><th>Data Type</th><th>Size</th><th>Constraints</th></tr> </thead> <tbody> <tr> <td>DriverID</td><td>NUMBER</td><td>6</td><td>PRIMARY KEY</td></tr> <tr> <td>DriverName</td><td>VARCHAR</td><td>100</td><td>NOT NULL</td></tr> <tr> <td>LicenseNumber</td><td>VARCHAR</td><td>50</td><td>NOT NULL, UNIQUE</td></tr> <tr> <td>PhoneNumber</td><td>VARCHAR</td><td>15</td><td>NULL allowed</td></tr> <tr> <td>ExperienceYears</td><td>NUMBER</td><td>2</td><td>DEFAULT 0</td></tr> <tr> <td>Status</td><td>VARCHAR</td><td>20</td><td>DEFAULT 'Active'</td></tr> </tbody> </table> <p>1. Display all records from both tables 2. Display drivername , license number along with status 3. Display all whose status is 'Active' 4. Display all and arrange by experience years 5. Display vehical no, name and status where capacity is 5 and status is 'Available' 6. Arrang all vehical by its capacity. 7. Display driver name (UPPERCASE), licence number(TITLE CASE), Status (LOWERCASE) along with experience 8. Show all vehicle numbers in uppercase,</p>	Field Name	Data Type	Size	Constraints	VehicleID	NUMBER	6	PRIMARY KEY,	VehicleNumber	VARCHAR	20	NOT NULL, UNIQUE	VehicleType	VARCHAR	50	NOT NULL	Capacity	NUMBER	3	NOT NULL	Status	VARCHAR	20	DEFAULT 'Available'	PurchaseDate	DATE	—	NULL allowed	Field Name	Data Type	Size	Constraints	DriverID	NUMBER	6	PRIMARY KEY	DriverName	VARCHAR	100	NOT NULL	LicenseNumber	VARCHAR	50	NOT NULL, UNIQUE	PhoneNumber	VARCHAR	15	NULL allowed	ExperienceYears	NUMBER	2	DEFAULT 0	Status	VARCHAR	20	DEFAULT 'Active'
Field Name	Data Type	Size	Constraints																																																						
VehicleID	NUMBER	6	PRIMARY KEY,																																																						
VehicleNumber	VARCHAR	20	NOT NULL, UNIQUE																																																						
VehicleType	VARCHAR	50	NOT NULL																																																						
Capacity	NUMBER	3	NOT NULL																																																						
Status	VARCHAR	20	DEFAULT 'Available'																																																						
PurchaseDate	DATE	—	NULL allowed																																																						
Field Name	Data Type	Size	Constraints																																																						
DriverID	NUMBER	6	PRIMARY KEY																																																						
DriverName	VARCHAR	100	NOT NULL																																																						
LicenseNumber	VARCHAR	50	NOT NULL, UNIQUE																																																						
PhoneNumber	VARCHAR	15	NULL allowed																																																						
ExperienceYears	NUMBER	2	DEFAULT 0																																																						
Status	VARCHAR	20	DEFAULT 'Active'

Branch/ Semester	Bachelor of Computer Applications																																												
Subject Name:	RDBMS																																												
Subject Code:	05MC0105																																												
Assignment:	Strategic coaching assignment																																												
Date:	11-11-2024																																												
Group:	Average																																												
1.	Write down the difference between DBMS and RDBMS.																																												
2.	Write a note on database users.																																												
3.	Explain functional dependency in detail																																												
4.	Explain normalization in details with example.																																												
5.	<p>A booking table contains following fields. Write down query to construct the table using constraints and write down queries for all instructions also.</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Data Type</th> <th>Size</th> <th>Constraint</th> </tr> </thead> <tbody> <tr> <td>BookingID</td> <td>INT</td> <td>—</td> <td>PRIMARY KEY,</td> </tr> <tr> <td>CustomerName</td> <td>VARCHAR</td> <td>20</td> <td>NOT NULL</td> </tr> <tr> <td>CustomerEmail</td> <td>VARCHAR</td> <td>20</td> <td>NULL allowed</td> </tr> <tr> <td>CustomerPhone</td> <td>VARCHAR</td> <td>15</td> <td>NULL allowed</td> </tr> <tr> <td>ServiceType</td> <td>VARCHAR</td> <td>20</td> <td>NOT NULL</td> </tr> <tr> <td>BookingDate</td> <td>DATE</td> <td>—</td> <td>NOT NULL</td> </tr> <tr> <td>BookingTime</td> <td>TIME</td> <td>—</td> <td>NULL allowed</td> </tr> <tr> <td>Status</td> <td>VARCHAR</td> <td>20</td> <td>DEFAULT 'Pending'</td> </tr> <tr> <td>PaymentStatus</td> <td>VARCHAR</td> <td>20</td> <td>DEFAULT 'Unpaid'</td> </tr> <tr> <td>Amount</td> <td>DECIMAL</td> <td>(10,2)</td> <td>NULL allowed</td> </tr> </tbody> </table>	Field Name	Data Type	Size	Constraint	BookingID	INT	—	PRIMARY KEY,	CustomerName	VARCHAR	20	NOT NULL	CustomerEmail	VARCHAR	20	NULL allowed	CustomerPhone	VARCHAR	15	NULL allowed	ServiceType	VARCHAR	20	NOT NULL	BookingDate	DATE	—	NOT NULL	BookingTime	TIME	—	NULL allowed	Status	VARCHAR	20	DEFAULT 'Pending'	PaymentStatus	VARCHAR	20	DEFAULT 'Unpaid'	Amount	DECIMAL	(10,2)	NULL allowed
Field Name	Data Type	Size	Constraint																																										
BookingID	INT	—	PRIMARY KEY,																																										
CustomerName	VARCHAR	20	NOT NULL																																										
CustomerEmail	VARCHAR	20	NULL allowed																																										
CustomerPhone	VARCHAR	15	NULL allowed																																										
ServiceType	VARCHAR	20	NOT NULL																																										
BookingDate	DATE	—	NOT NULL																																										
BookingTime	TIME	—	NULL allowed																																										
Status	VARCHAR	20	DEFAULT 'Pending'																																										
PaymentStatus	VARCHAR	20	DEFAULT 'Unpaid'																																										
Amount	DECIMAL	(10,2)	NULL allowed																																										
	<ol style="list-style-type: none"> 1. Describe table 2. Insert statement to insert record 3. Display customer name, amount and payment status 4. Display all customers whose name begin with 'S' 5. Display all whose email id is NULL 6. Display all where status is 'Pending' and Payment status is 'Paid' 7. Display all where status is 'Pending' OR Payment status is 'Unpaid' 8. Display all and arrange by payment status 9. Display all and arrange by booking date 10. Display booking id, customer name, booking date and time and arrange as per booking time 11. Find out total amount according to payment status 12. Find out average amount according to status 																																												

Branch/ Semester	Bachelor of Computer Applications
Subject Name:	RDBMS
Subject Code:	05MC0105
Assignment:	Strategic coaching assignment
Date:	11-11-2024
Group:	Challenging
1.	Write down the characteristics of DBMS
2.	Write a note ANSI SPARC architecture
3.	Explain data independence .
4.	Explain cardinality with types.
5.	Write down the difference between <ol style="list-style-type: none"> 1. Strong and weak entity 2. Stored and derived attributes 3. Generalization and specialization 4. First normal form and third normal form 5. Lossy decomposition and lossless decomposition
